Corporate introduction

INVT (Shenzhen INVT Electric Co., Ltd) has been concentrating on industry automation and energy power since its foundation in 2002 and is committed to "Providing the best product and service to allow customers more competitiveness". INVT goes public in 2010 and is the first A-share listed company (002334) in Shenzhen Stock Exchange in the industry. At present, INVT owns 15 subsidiaries and more than 4000 employees, over 40 branches, forming a sales network covering more than 100 overseas countries and regions.

INVT has been awarded as the Key High-tech Enterprise of National Torch Plan based on mastering of key technologies in power electronics, auto control and IT. With business covering industry automation, electric vehicle, network power and rail transit, INVT has established 11 R&D centers nationwide, boasts more than 1300 patents and owns the first lab in the industry awarded ACT qualification from TÜV SÜD, UL-WTDP and CNAS National Lab. The industrial parks in

Shenzhen and Suzhou aim to provide customers with advanced integrated product development design management, comprehensive product R&D test and auto informational production. The worldwide INVT branches and warranty service centers are ready to offer customers all-around back-ups including professional solutions, technical trainings and service support.

In the next decade, INVT will continue to take "Honesty and Integrity, Professionalism and Excellence" as our business philosophy, enhance core business sectors including industrial automation, electric vehicle, network power and rail transit based on the three major technologies in industry automation and energy power fields, and strive to become a leading, responsible and harmonic international professional group armed with proper product structure, leading technologies, efficient management, robust profitability and superior competitiveness.

Industrial Park in Suzhou

Group's core industrial base and R&D center in East China

Industrial Park in Guangming Shenzhen

Group headquarters, new product development and new business incubation base

Product introduction

The GD880 series High-Performance industrial drives is divided into two topological forms: single drive and multi drive, and is a transmission product positioned for high-end applications. The product is modular designed based on the DFX concept and adopts advanced control algorithms. It has excellent speed and torque control performance, high reliability, high power density, convenient installation, debugging, maintenance, and comprehensive protection.

- Excellent speed and torque control performance
- Modular design, as flexible as building blocks, making project integration simple and efficient
- Long-life component selection and fast fault recovery design to ensure efficient process control
- Ergonomic design to make installation and maintenance easier
- Enriched expansion capability to support various protection options

Application fields

Metallurgy

High speed bar and strip hot rolling equipment, wide and thick plate equipment, cold rolling host, pickling line, annealing line, galvanizing line, color coating line, non-ferrous metal manufacturing, rolling equipment, diaphragm pump.

Building materials

Support for and technical renovation of large-scale equipment such as rotary kilns, ball mills, belt conveyors, and crushers.

Petroleum

Heavy petroleum equipment such as fully electric drilling rigs, energy storage and repair rigs, electric drive transformation of large petroleum machinery equipment, oilfield water injection equipment, fracturing prys, and sand mixing prys.

Marine

Shore based power supply, ship main side thrusters, anchor winches, shaft generators, DC networking system, and ship auxiliary equipment.

Port hoisting

Quayside crane, tire crane, rail crane, ship unloader, gantry crane, belt conveyor, large shipbuilding gantry crane, large metallurgical casting crane.

Testing

Battery simulator, engine testing platform, motor testing platform, and new energy vehicle testing system.

Papermaking

Joint equipment for paper copying, including production lines such as pulp box, mesh section, pressing section, drying section, gluing, hard calendering, coating, super calendering machine, and rewinding machine.

Others

Technical renovation and supporting application of equipment such as centrifuges, textile equipment, shield tunneling machines, grinders, and electric shovels.

Technical data

	Item	Specifications
Basic rectifier	Input voltage	4: 380- 440VAC 3PH ±10%, -15%<1min 6: 520- 690VAC 3PH ±10%, -15%<1min
	Input frequency	47-63Hz
	Output voltage	Input voltage * 1.35
	Overload capacity	Light overload: 110% of ILD for 1 min every 5 min Heavy overload: 150% of IHD for 1 min every 5 min
	Work efficiency	≥98%
Regenerative rectifier	Power factor	≥0.95 (Basically at rated current)
	Input voltage	4: 380- 440VAC 3PH ±10%, -15%<1min 6: 520- 690VAC 3PH ±10%, -15%<1min
	Input frequency	47-63Hz
	Output voltage	Input voltage * 1.3 – Input voltage *1.4
	Overload capacity	Light overload: 110% of ILD for 1 min every 5 min Heavy overload: 150% of IHD for 1 min every 5 min
Active rectifier	Work efficiency	≥98%
	Power factor	≥0.95 (Basically at rated current)
	Input voltage	4: 380- 440VAC 3PH ±10%, -15%<1min 6: 520- 690VAC 3PH ±10%, -15%<1min
	Input frequency	47-63Hz
	Output voltage	4: 1.5 * Input voltage- 720V; 6: 1.5 * Input voltage- 1080V
Inverter	Overload capacity	Light overload: 110% of ILD for 1 min every 5 min Heavy overload: 150% of IHD for 1 min every 5 min
	Work efficiency	≥97%
	Power factor	≥0.99 (Basically at rated current)
	THD	THDI < 5% (at rated power) THDU<5% (Rsc>20)
	Input voltage	4: 510- 720VDC 6: 700- 1035VDC
Environment condition	Output frequency	0-400Hz
	Output voltage	0-0.7 * VDC
	Overload capacity	Light overload: 110% of ILD for 1 min every 5 min Heavy overload: 150% of IHD for 1 min every 5 min
	Work efficiency	≥98.5%
	Control method	V/F; SVC; FVC
	Motor type	Permanent magnetic synchronous motor; asynchronous motor; linear motor
	Starting torque	FVC: 0Hz/200%; SVC: 0.25Hz/150%
	Accuracy at stable speed	FVC: ±0.01%; SVC: ±0.1%
	Speed fluctuation	FVC: ± 0.02%; SVC: ± 0.3%
	Dynamic speed decrease	FVC: 0.3%*s- 0.5%*s, SVC: 0.1%*s- 0.3%*s (@100% torque step)
Mechanical data	Speed regulation ratio	V/F: 1:50; SVC 1:200; FVC: 1:1000
	Torque accuracy	FVC: ≤3%; SVC: ≤5%
	Torque response	FVC: <5ms; SVC: <10ms
	Working temperature	-10°C - +50°C; Derating is required when the ambient temperature exceeds 40°C
Safety performance	Relative humidity	5%- 95%, no condensation
	Installation altitude	Below 1000m (Derating is required when the altitude exceeds 1000m Derate by 1% for every increase of 100m.)
	Cooling	Forced air cooling

Product features

Highly reliable

- Selection of long lifetime components to ensure quality from the source and stable running of equipment.

Selection of long lifetime components

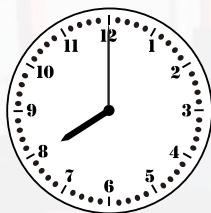

- A comprehensive testing and validation system ensures that products undergo multiple verifications and tests from design to factory, ensuring their reliability from the source.

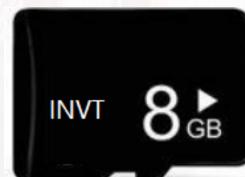

- Independent air duct and thickened imported conformal coating provide dual protection, meeting IEC60721-3 3C3 environmental requirements. The corrosion resistance in scenarios such as high humidity, high salt spray, and corrosive gases is significantly improved.

- Built in real-time clock function for more accurate fault information.

- Standard storage card for quick and convenient parameter backup.

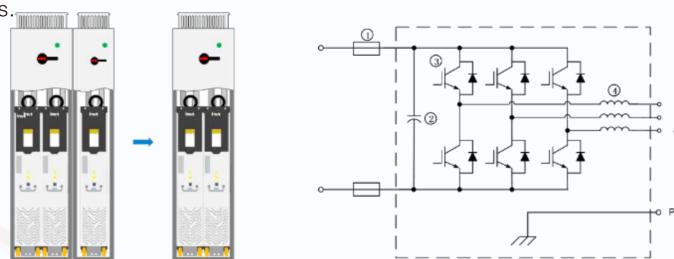

- Fault classification Users can define 10 faults, which can be grouped and handled by severity, including shielding a fault without processing, alarming but keeping running, decelerating to stop, and coasting to stop, so as to reduce unnecessary downtime and ensure continuous operation of equipment.

Fault severity 1	Shield the fault
Fault severity 2	Alarm but keep running
Fault severity 3	Decelerate to stop
Fault severity 4	Coast to stop

● Derating due to faults

Independent three-phase power unit design ensures the system can be derated to keep running in case of unit failure so as to minimize shutdown losses.

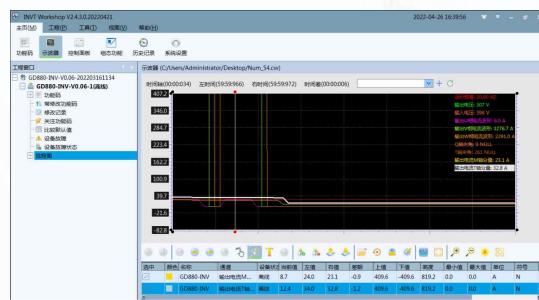

- The A8i unit adopts a quick plug connection and has built-in rollers at the bottom so that it can be directly pushed into the cabinet. The unit can be disassembled or assembled without removing the motor cable. The drawer design for fans facilitates easy maintenance and replacement.

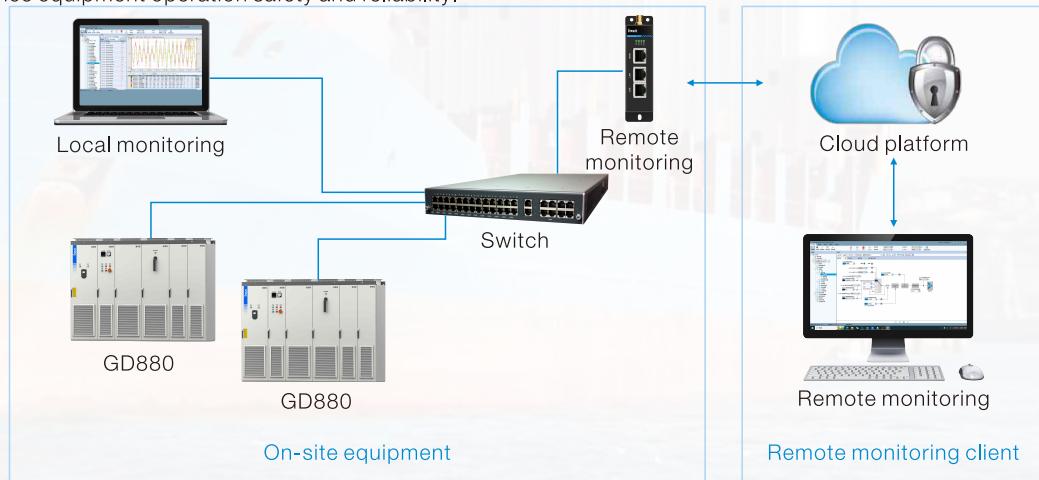

● Fault recorder

Saving data to 10 channels, saving 100 groups of fault waveform data cyclically through re-writing, and analyzing faults without the need of fault simulation.

● Remote O&M

After being authorized, manufacturer technical experts can connect on-site equipment through the Internet of Things to help fault locating, observe equipment operation data, and optimize operation parameters, so as to improve production efficiency, and enhance equipment operation safety and reliability.

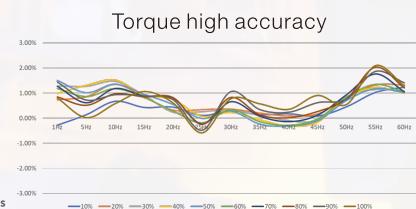

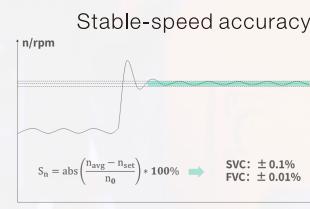

Excellent performance

● High-speed and high-accuracy control

The multi-core architecture achieves high-speed and high-accuracy loop computing control, with good process consistency and improved product quality for customers.

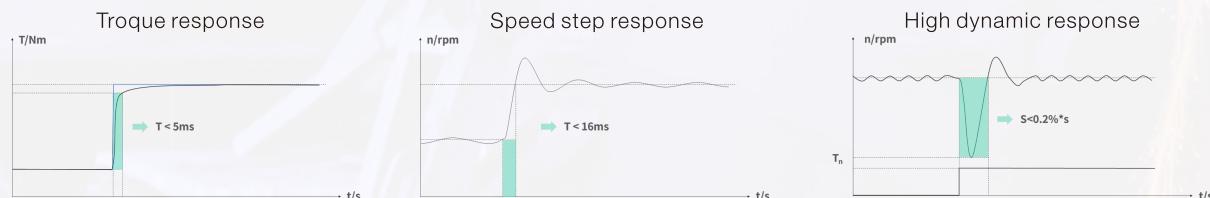

High accuracy		
Stable-speed accuracy		Torque accuracy
FVC	0.01%	<3%
SVC	0.1%	<5%

● High dynamic response

Real time load observation, achieving torque response of less than 5ms, with small speed drop area, fast speed recovery, and reducing pulling force.

High dynamic response			
Torque response		Speed step response	Dynamic speed decrease
FVC	<5ms	<16ms	0.1%*s-0.3%*s
SVC	10ms	<40ms	0.4%*s-0.5%*s

● High performance

Four-quadrant product THDi < 5%, far below the limits specified by IEEE519 and G5/4, achieving the directly feedback of the power grid excellent low-frequency performance, making it easy to cope with lifting loads.

Master/slave control with millisecond-level response, achieving more balanced load distribution.

High performance		
Low harmonic	Zero-speed suspension	Master/slave control
<5%	150% (SVC)	<3ms

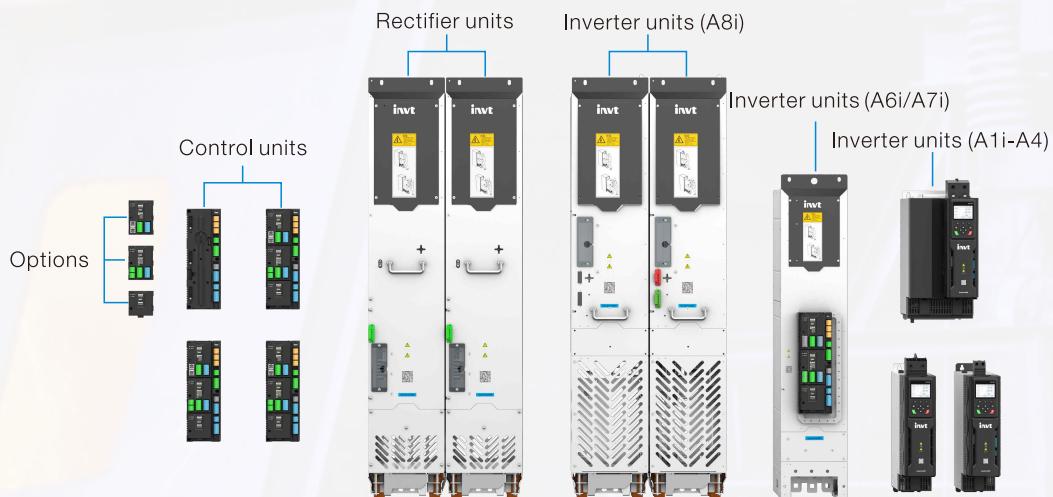

Flexible and easy to use

● Modular design

Control component modularization, making scalability flexible.

Power unit modularization, facilitating integration.

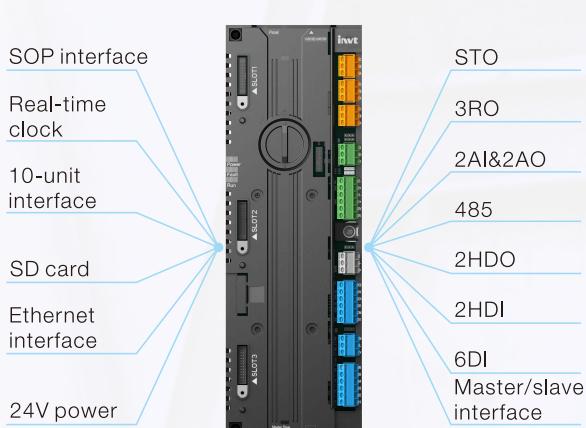

Modular front maintenance design for cabinets, achieving engineering need based combination to shorten delivery time and facilitate maintenance.

● Abundant options for expansion

Abundant system resources and I/O configuration, with user I/O functions differentiated by color to prevent accidental insertion and removal.

Control unit equipped with a standard 3-channel expansion interface, able to support up to 7 expansion modules in conjunction with an expansion solution, including encoder module, I/O, communication expansion functions, achieving interconnection and interoperability of industrial equipment.

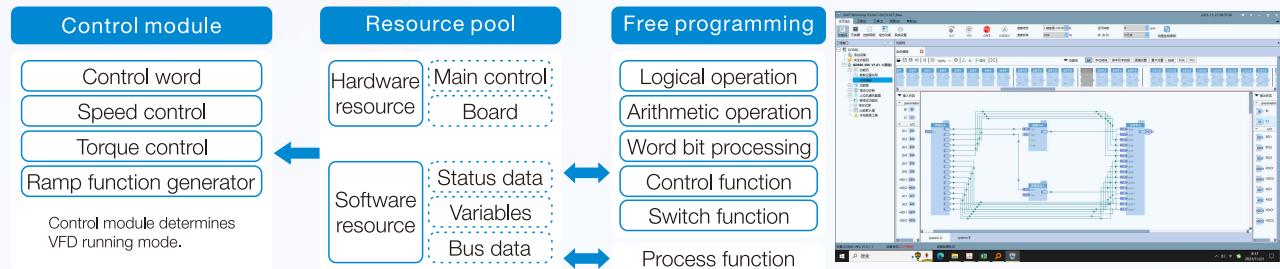

Options		
<ul style="list-style-type: none"> · HTL encoder module · TTL encoder module · Resolver encoder module 	<ul style="list-style-type: none"> · I/O module 	<ul style="list-style-type: none"> · Profinet IO communication module · Profibus-DP communication module · CANopen communication module · Fiber-optic module

● Free programming

By using open control units and expansion I/O resource status, operation status, control word, status word and other resource interfaces, free programming can achieve secondary development and seamless integration with third-party control substitution, significantly reducing transformation workload, and assisting upgrading.

Programming can be modular and configurable, reducing non-standard code development, ensuring firmware consistency, facilitating spare parts management, and reducing maintenance costs.

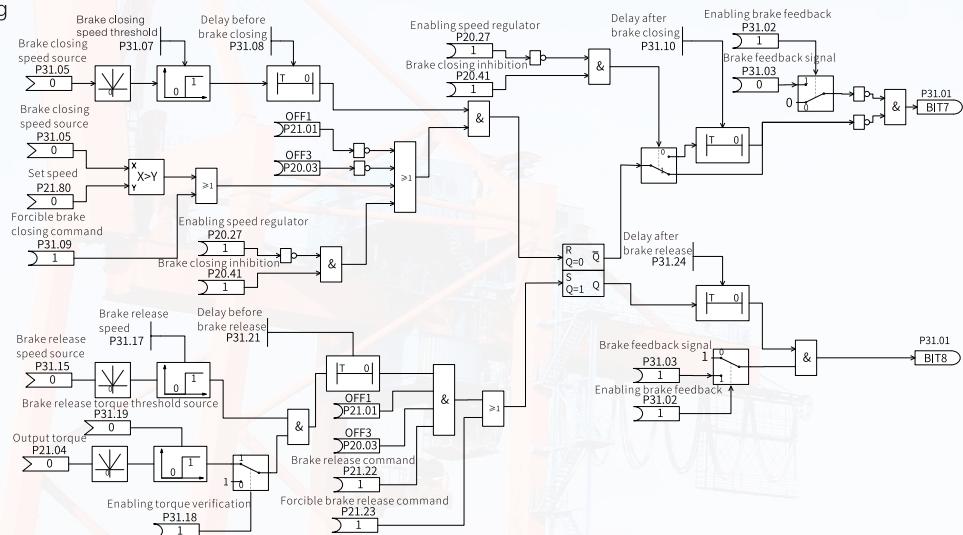

● Holding brake logic

Integrated with lifting holding brake control logic, effectively shortening the development cycle of automation systems.

▲ Integrated with lifting holding brake control logic

- External/Local brake control for selection
- Brake feedback detection to ensure safety
- Torque memorizing and pre-torque to ensure smooth starting
- Zero servo ensuring safety without slipping

▲ Anti-snag protection to handle emergency

● Easy to debug

LCD screen with intuitive display, without the need to consult the operation manual, saving debugging time.

Supporting parameter upload, storage, and download, saving engineering batch debugging time through parameter copying.

IP54 high protection design, supporting cabinet door external connection for easy integration.

Type-C firmware/word library upgrade for fast language adaptation.

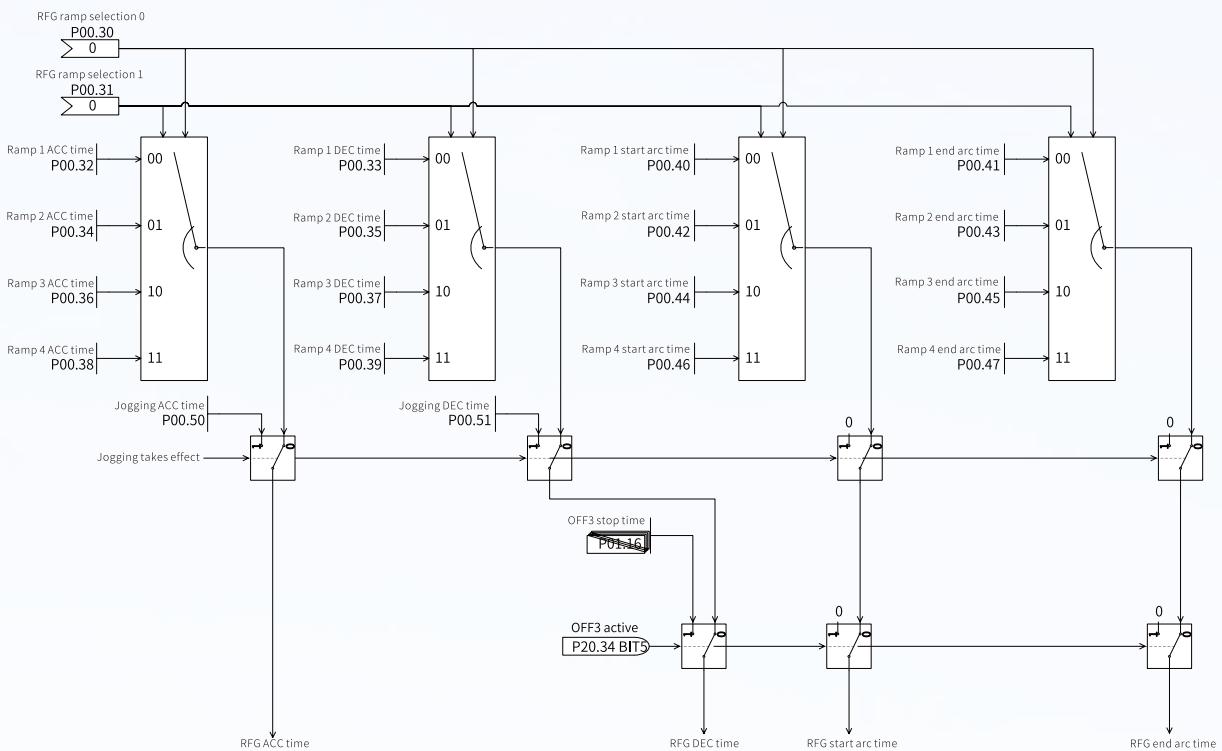

● Open function diagram

Function modularization and clear definition, convenient for engineers to learn and use at low cost.

Open data flow diagram and transparent control scheme.

Function diagrams integrated with data testing for easy problem locating.

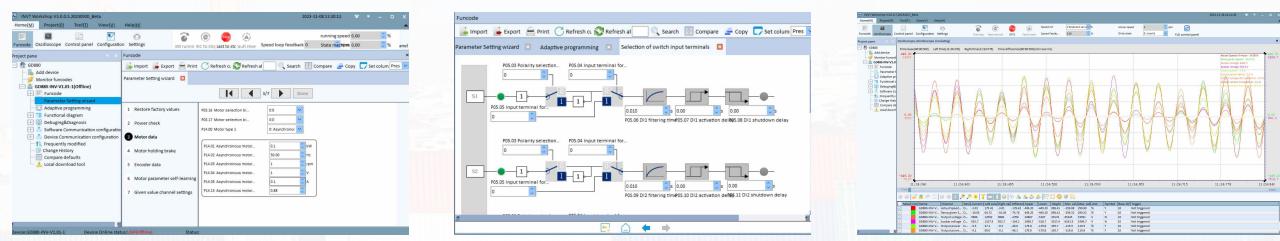

● Workshop host controller software

Standard Ethernet debugging interface to achieve local and remote debugging, monitoring, and maintenance of drive equipment . Professional debugging wizard to quickly complete drive configuration, improving debugging efficiency.

High speed online oscilloscope, supporting multi-device monitoring, with each device supporting the storage and playback of 10 channels of waveform data, and real-time display of status information, convenient for quick problem locating, greatly improving debugging efficiency.

Support for function parameter comparison, batch upload, download, printing, and file export.

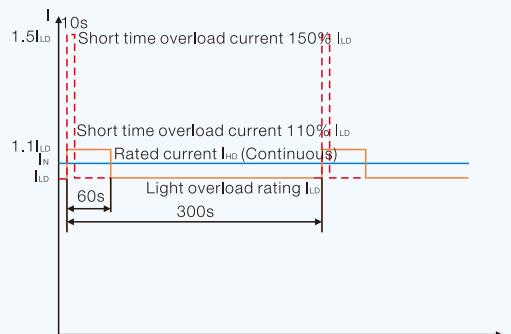

Naming rule

GD880 - 51 - 0650 - 6 - LC

Description	Example
Abbreviation of product series	GD880: GD880 Series Engineer VFD
Product type	11: Variable-frequency drive unit 16: 2-quadrant variable-frequency drive cabinet 41: 3PH braking unit 46: 3PH braking cabinet 51: Inverter unit 56: Inverter cabinet 71: Basic rectifier unit 76: Basic rectifier cabinet 81: Regenerative rectifier unit 86: Regenerative rectifier cabinet 91: Active rectifier unit 96: Active rectifier cabinet 09: DC/DC Converter 26: Active-rectifier 4-quadrant variable-frequency drive cabinet 36: Smart-rectifier 4-quadrant variable-frequency drive cabinet
Rated value	Rated current: 650A Rated power: 41/46
Voltage class	4: 380- 440VAC 3PH ±10%, -15%<1min 6: 520- 690VAC 3PH ±10%, -15%<1min
Product management No.	Default: Air cooling LC: Liquid-cooling N: A8n unit L2: A8L2 unit K: Frame structure

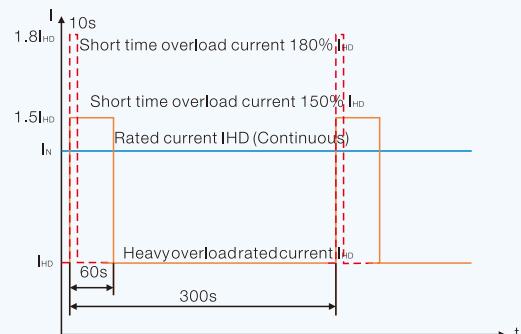

Overload curve

Based on light overload continuous operating current I_{LD} , the power unit has overload capacity of 110% overload for 60 seconds every 5 minutes or 150% overload for 10 seconds every 5 minutes.

Light overload application

Based on heavy overload continuous operating current I_{HD} , the power unit has overload capacity of 150% overload for 60 seconds every 5 minutes or 180% overload for 10 seconds every 5 minutes.

Heavy overload application

Note: The 10s short-term overload current is related to the unit temperature, and different overload modes are different.

GD880-71 basic rectifier unit

U_N= 400V (range 380 to 480V). The power ratings are valid at nominal voltage 400V (475 to 3616kW).

* The control unit needs to be used in conjunction with the AC voltage detection module and the fiber optic communication module.

* The panel needs to be purchased separately for the products in the A6 or A7 frame.

* The panel and control unit need to be purchased separately for the products in the A8 frame.

* The products in the A8 or above frame use fast connection structures, products in the L frame adopt regenerative filter unit, while products in other frames use discrete regenerative filter.

U_N= 690V (range 520 to 690V). The power ratings are valid at nominal voltage 690V (685 to 6057kW).

Note:

Nominal ratings: I_N, Rated current available continuously without overloadability at 40 °C. I_{max}, Maximum output current. Available for 10 seconds at start, then as long as allowed by drive temperature.

Light overload use: I_{LD}, Continuous current allowing 110% I_{LD} for 1 minute every 5 minutes at 40 °C.

Heavy overload use: I_{HD}, Continuous current allowing 150% I_{HD} for 1 minute every 5 minutes at 40 °C.

GD880-91 active rectifier unit

U_N= 400V (range 380 to 480V). The power ratings are valid at nominal voltage 400V (64 to 3167kW).

* The panel needs to be purchased separately for the products in the A6 or A7 frame.

* The panel and control unit need to be purchased separately for the products in the A8 frame.

* The products in the A8i frame use built-in output reactors, quick plug, backend cable exit.

* The products in the A8n frame use direct connection, frontend cable exit, without output reactors.

* The products in the A8L2 frame use built-in output reactors, frontend cable exit, and cable connection.

Note:
Nominal ratings: I_N , Rated current available continuously without overloadability at 40 °C. I_{max} , Maximum output current. Available for 10 seconds at start, then as long as allowed by drive temperature.
Light overload use: I_{ld} , Continuous current allowing 110% I_{ld} for 1 minute every 5 minutes at 40 °C.
Heavy overload use: I_{hd} , Continuous current allowing 150% I_{hd} for 1 minute every 5 minutes at 40 °C.

GD880-11 variable-frequency drive unit

$U_N = 440V$ (range 380 to 480V). The power ratings are valid at nominal voltage 440V (5.5 to 500kW) (E frame).

Heavy overload use: I_{HD}, Continuous current allowing 150% I_{HD} for 1 minute every 5 minutes at 40 °C.

Control unit

GD880 - ICU - 11

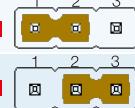

Description	Example
Abbreviation of product series	GD880: GD880 series engineering VFD
Control unit type	ICU: Inverter control unit TCU: Basic rectifier control unit RCU: Regenerative rectifier control unit ACU: Active rectifier control unit DCU: DC/DC control unit BCU: 3PH braking control unit
Master-slave	1: Master/slave interface (Rectification without master–slave) 1: One power unit (rectifier /inverter units) 2: Two power units (regenerative /active rectifier units) 3: Three power units (basic rectifier units or inverter units) 4: Four power units (regenerative /active rectifier units) 6: Six power units (rectifier /inverter units) A: Ten power units (active rectifier /inverter units)
Unit connection	

Control unit interface description

Terminal NO.	Terminal identification	Terminal Description	Cable specifications
Input power supply			
1	+24E	24Vdc±10%2A	Two-core twisted-pair cable is recommended Cross-sectional area: 0.5-2.5mm ²
2	CM		
Digital input			
1	DI1		
2	DI2	1. Input impedance: 3.3kΩ	
3	DI3	2. Voltage input range: 12-30V	
4	DI4	3. Supports NPN and PNP bi- direction input, relay contact input	
5	DI5	4. Max. input frequency: 1kHz	Single-core wire Cross-sectional area: 0.5- 2.5mm ²
6	DI6		

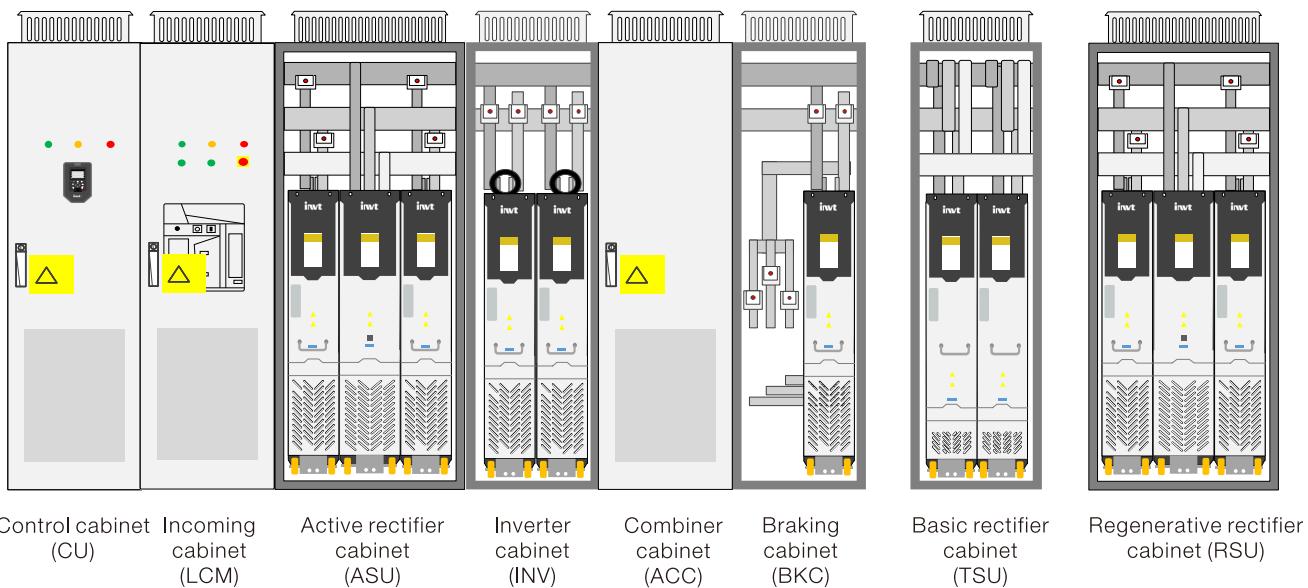

Terminal NO.	Terminal identification		Cable specifications
DIL			
1	DIL	Digital interlocking: When its input is high, all other input terminals are forced to be invalid	
2	PW	Provides power supply for DIL, DI1–DI6, HDI, HDO	Two-core twisted-pair cable is recommended Cross-sectional area: 0.5–2.5mm ²
3	COM	Digital input Common ground	
Jumper J10: Power selection			
		 When pin 1 and pin 2 are short-circuited, i.e. the PW and internal COM are connected, DI uses the internal power ground. If the external power supply is used, the shorting cap should be removed.	
		 When pin 2 and pin 3 are short-circuited, i.e. the PW and internal +24Vare connected, DI uses the internal power. If the external power supply is used, the shorting cap should be removed.	
HDIO			
1	+24	1. Input Type: PNP, NPN 2. Input frequency range: 0–50kHz 3. Input Voltage range: 12–30V 4. Duty cycle: 30%–70%	
2	HDI1		Two-core twisted-pair cable is recommended. Cross-sectional area: 0.5–2.5mm ²
3	HDI2		HDI and COM, HDO and COM use twisted-pair cables.
4	COM	1. Output Type: OC 2. Output frequency range: 0–50kHz	
5	HDO1	3. Max. output load: 20mA/30V	
6	HDO2	4. Duty ratio: 50%	
485 Communication terminal			
1	485+	RS485 bus, standard 5V level Terminal resistance: 120 Ω	Two-core twisted-pair cable is recommended. Cross-sectional area: 0.5–2.5mm ²
2	485-	Maximum Baud Rate: 115200	
3	PE	Maximum nodes: 32 (without relay)	
Jumper J8: Terminal resistance selection			
		 When 1 and 2 are short-circuited, the terminal resistor is disconnected.	
		 When 2 and 3 are short-circuited, the terminal resistor is connected.	
Analog input terminal			
1	-10V	Positive and negative 10V power supply Max. output current: 10mA	
2	+10V		
3	AI1+	Current input: -20mA–20mA, R _{in} : 500Ω	When two AIs are used, use two two-core shielded twisted-paircables.
4	AI1-	Voltage input: -10V–10V, R _{in} : 30kΩ	When reference voltage is used, use one four-core shielded twisted-pair cable for one AI.
5	AI2+	Differential input range: ±30V	
6	AI2-	Sampling interval: 0.1ms Resolution: 11 bit+signbit	
Jumper J4: Selection between AI1 voltage and current signal inputs			
		 When 1 and 2 are short-circuited, AI1 current input is used.	
		 When 2 and 3 are short-circuited, AI1 voltage input is used.	
Jumper J5: Selection between AI2 voltage and current signal inputs			
		 When 1 and 2 are short-circuited, AI2 current input is used.	
		 When 2 and 3 are short-circuited, AI2 voltage input is used.	
Analog output terminal			
Analog output	AO1	AO output range: 0–20mA, R _{load} ≤ 500Ω	Two-core twisted-pair cable is recommended. Cross-sectional area: 0.5–2.5mm ²
	GND	0–10V, R _{load} ≥10kΩ	AO1 and GND, AO2 and GND use twisted-pair cables.
	AO2	Resolution: 11 bit+signbit Accuracy: 2% of full scale range	
Jumper J6: Selection between AO1 voltage and current signal outputs			
		 When 1 and 2 are short-circuited, AO1 current output is used.	
		 When 2 and 3 are short-circuited, AO1 voltage output is used.	

Terminal NO.	Terminal identification	Terminal Description	Cable specifications
Jumper J7: AO2 voltage or current signal output selection			
		Short circuit between 1 and 2, AO2 current output	
		Short circuit between 2 and 3, AO2 voltage output	
Relay 1 output terminal			
1	RO1A	Output type: passive normally open and normally closed contacts Contact parameters: 250Vac/30Vdc, 3A	Single core wire cross-sectional area: 0.5-2.5mm ²
2	RO1B		
3	RO1C		
Relay 2 output terminal			
1	RO2A	open and normally closed contacts Contact parameters: 250Vac/30Vdc, 3A	Single core wire cross-sectional area: 0.5-2.5mm ²
2	RO2B		
3	RO2C		
Relay 3 output terminal			
1	RO3A	open and normally closed contacts Contact parameters: 250Vac/30Vdc, 3A	Single core wire cross-sectional area: 0.5-2.5mm ²
2	RO3B		
3	RO3C		
Master-slave optical fiber			
1	TX	Sending (fiber-optic communication)	Fiber optic
2	RX	Receive (fiber-optic communication)	
Safety torque interrupt			
1	STO1		
2	+24V	Inverter module safety torque interrupt input Factory default short circuit	Recommend using 4-core twisted pair cables cross-sectional area: 0.5-2.5mm ²
3	STO2		
4	+24V		
RJ45 for panel			
1	RJ45	Connect SOP-880 panel	CAT 6
RJ45 for Ethernet			
1	RJ45	Communicate with PC	CAT 6

Module options

Option type	Type	Category	Specification Data
Feedback interface module	EC-PG805-24	HTL encoder module	Supporting open collector, push-pull, and differential encoders, and pulse reference and frequency-divided output Supporting PT100 based temperature detection
	EC-PG805-05	TTL encoder module	Supporting differential or RS422 signal input encoders, and pulse reference and frequency-divided output Supporting PT100 based temperature detection
	EC-PG804	Resolver encoder module	Rotary transformer type encoder; 10/20KHz optional, supports KTY84 or PT100 temperature detection
Communication module	EC-TX803	Profibus-DP communication module	Profibus-DP, 9.6Kbit-12Mbit/S
	EC-TX809	Profinet IO communication module	Profinet IO, 100Mbit/S
	EC-TX805	CANopen communication module	CANopen, 20Kbit-1Mbit/S
Fiber optic module	EC-TX821	1-channel fiber-optic module	1-channel 50M fiber-optic module
	EC-TX823	3-channel fiber-optic module	3-channel 50M fiber-optic module
I/O module	EC-IO801	I/O module	3DI+2AI+2AO+1RO
Voltage detection module	IVDM-10	AC voltage detection module	0-100VAC or 0-690VAC
	IVDM-20	DC voltage detection module	0-1000VDC

Cabinet code description

Control cabinet (CU) Incoming cabinet (LCM) Active rectifier cabinet (ASU) Inverter cabinet (INV) Combiner cabinet (ACC) Braking cabinet (BKC) Basic rectifier cabinet (TSU) Regenerative rectifier cabinet (RSU)

Name	Code	Size (W*H*D)	Description
Incoming cabinet (LCM)	LCM11	400*2140*650	800A circuit breaker cabinet
	LCM12	400*2140*650	1000A circuit breaker cabinet
	LCM13	400*2140*650	1250A circuit breaker cabinet
	LCM14	400*2140*650	1600A circuit breaker cabinet
	LCM25	600*2140*650	2000A circuit breaker cabinet
	LCM26	600*2140*650	2500A circuit breaker cabinet
	LCM27	600*2140*650	3200A circuit breaker cabinet
	LCM58	1000*2140*650	4000A circuit breaker cabinet
	LCM59	1000*2140*650	5000A circuit breaker cabinet
Control cabinet (CU)	LCM5A	1000*2140*650	6300A circuit breaker cabinet
	CU11	400*2140*650	Control cabinet 1 (can housing up to 4 control units)
	CU22	600*2140*650	Control cabinet 2 (can housing up to 6 control units)
Basic rectifier cabinet (TSU)	TSU11	400*2140*650	Basic rectifier cabinet 1 (1*D8T)
	TSU22	600*2140*650	Basic rectifier cabinet 2 (2*D8T)
	TSU33	800*2140*650	Basic rectifier cabinet 3 (3*D8T)
Regenerative rectifier cabinet (RSU)	RSU21	600*2140*650	Regenerative rectifier cabinet 1 (A8+L)
	RSU42	850*2140*650	Regenerative rectifier cabinet 2 (2*A8+L)
Active rectifier cabinet (ASU)	ASU21	600*2140*650	Active rectifier cabinet 1 (A8+LCL)
	ASU42	850*2140*650	Active rectifier cabinet 2 (2*A8+LCL)
Inverter cabinet (INV)	INV11	400*2140*650	Inverter cabinet (A6i~A8i)
	INV22	600*2140*650	Inverter cabinet (2*A8i)
	INV33	800*2140*650	Inverter cabinet (3*A8i)
Braking cabinet (BKC)	BKC21	600*2140*650	
Combiner cabinet	ACC	600*2140*650	Mainly used for bus connection and motor output cable convergancy

GD880-76 basic rectifier cabinet (TSU)

UN=400V (range: 380-480V). The power ratings are valid at nominal voltage 400V (475-3616kW).

Note:

Nominal ratings: I_N indicates the continuous operating current without overload at 40°C, while I_{max} indicates max. output current.

Light overload use: I_{LD} indicates the light overload continuous operating current. 110% *I_{LD} is allowed for 1 minute every 5 minutes at 40°C.

Heavy overload use: I_{HD} indicates the heavy overload continuous operating current. 150% *I_{HD} is allowed for 1 minute every 5 minutes at 40°C.

GD880-86 regenerative rectifier cabinet (RSU)

U_N=400V (range: 380-480V). The power ratings are valid at nominal voltage 400V (161-3513kW).

Note:

Nominal ratings: I_N indicates the continuous operating current without overload at 40°C, while I_{max} indicates max. output current.

Light overload use: I_{LD} indicates the light overload continuous operating current. 110% *I_{LD} is allowed for 1 minute every 5 minutes at 40°C.

Heavy overload use: I_{HD} indicates the heavy overload continuous operating current. 150% *I_{HD} is allowed for 1 minute every 5 minutes at 40°C.

Note:

Nominal ratings: I_N indicates the continuous operating current without overload at 40°C, while I_{max} indicates max. output current.

Light overload use: I_{LD} indicates the light overload continuous operating current. 110% *I_{LD} is allowed for 1 minute every 5 minutes at 40°C.

Heavy overload use: I_{HD} indicates the heavy overload continuous operating current. 150% *I_{HD} is allowed for 1 minute every 5 minutes at 40°C.

Feature and option list

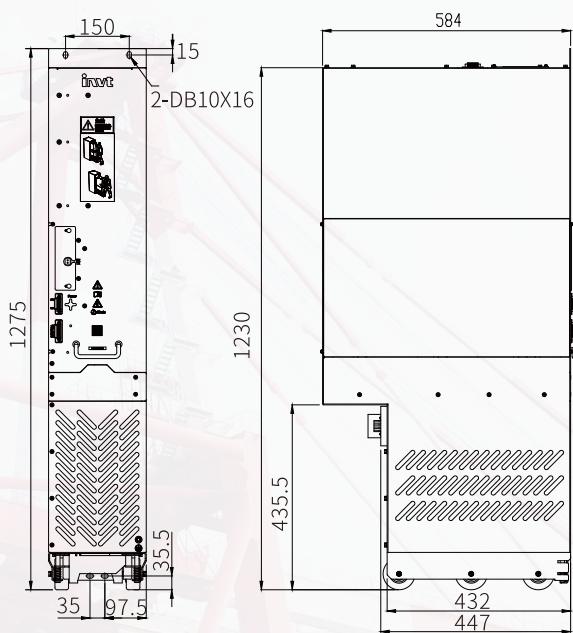

Code	Voltage and power ranges 4:4-3000kW 6:55-6300kW	GD80-56 inverter cabinet	GD80-76 basic rectifier cabinet	GD80-86 regenerative rectifier cabinet	GD80-96 active rectifier cabinet	GD80-46 3PH braking cabinet	GD80-09 DC/DC cabine	GD80-16 variable frequency cabinet	GD80-36 regenerative rectifier variable frequency cabinet	GD80-26 active rectifier variable frequency cabinet
Degree of protection										
C120	IP20 (UL open type)	●	●	●	●	●	●	●	●	●
