Auto-switching / Hybrid Mode

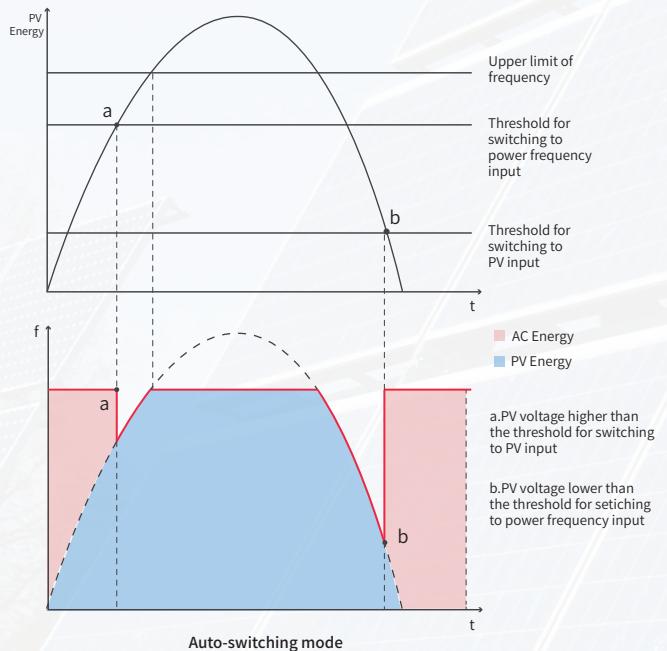

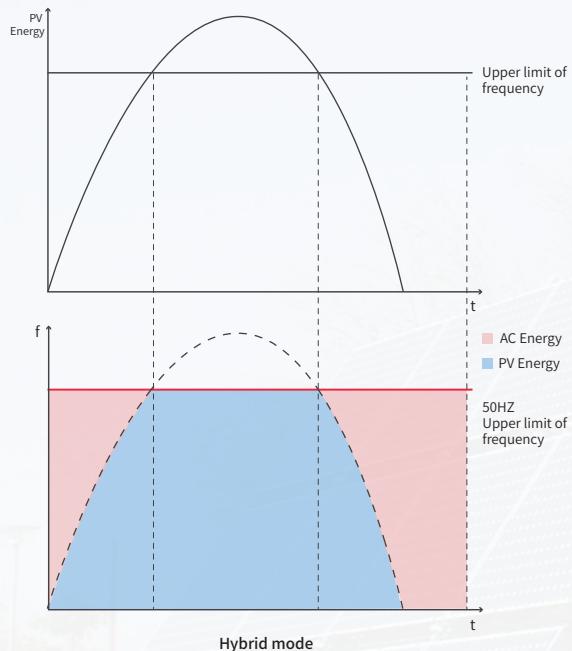

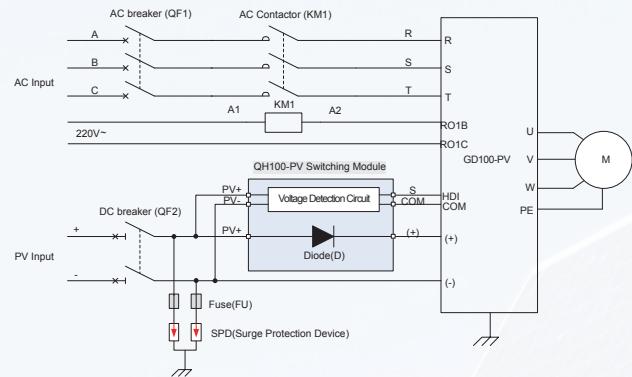

Hybrid mode

In hybrid mode, GD100-PV will use the energy of both PV modules and grid (or generator) at same time. The stronger the light radiation, the less AC energy is consumed. As the radiation reduction, the consumption of AC energy will increase to maintain the output.

Auto-switching

If don't need to run at full high frequency at all times, you can choose to configure an auto-switch module. It can monitor the PV voltage, and when the voltage is below the set threshold, it can control the contactor to act and connect AC power to meet energy needs. When the voltage on the PV side exceeds the set threshold, the contactor can be controlled to operate and disconnect the AC power to reduce energy consumption.

• Solution

- Smart regular inspection and efficient O&M: can realize remote monitoring and analysis of PV water pump faults and exceptions, effectively solving practical problems such as difficult monitoring and control of PV water pumps, inspection difficulty, and low O&M effectiveness. Ultimately, the annual cost of O&M and inspection can be reduced by 30%.
- Panoramic monitoring: can acquire operational data information such as voltage, current, and power of PV water pumps in real time, comprehensively monitor the operation of PV devices, and make intelligent analysis to achieve maximum operational efficiency of the entire PV water pump system.
- PV water pump devices can be remotely controlled through computers and mobile phones, and key parameters of the devices can be remotely regulated.

IP54 Cabinet

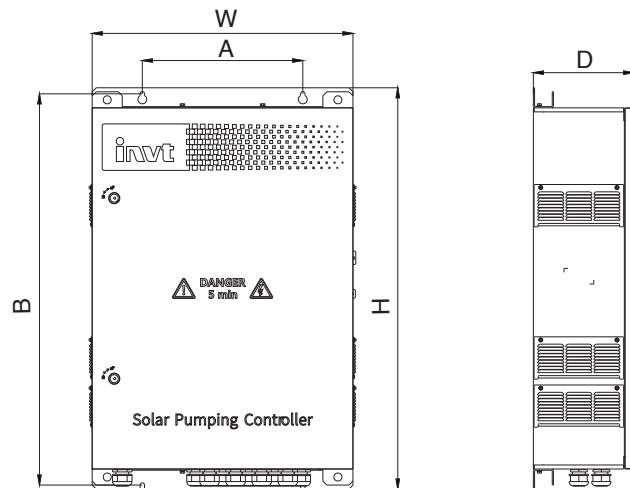

We have designed an IP54 electrical cabinet scheme for GD100-PV, equipped with some necessary low-voltage appliances, which can achieve boosting function and auto-switch function.

Note:

- 1.The IP54 cabinet with the rated power equal to or less than 2.2kW are equipped with the boost module, supporting auto switch.
- 2.The IP54 cabinet support optional 4G and WIFI module.
